Every night the forests of Georgia echo with the sounds of many living creatures. We call living creatures that come out to hunt or to eat at night nocturnal. Essentially, they sleep all day and then come out to hunt and to eat all night. Some common examples of nocturnal living creatures are the owl, the bat, and the cricket. Although they often forage for food at night, bears are not strictly nocturnal since they can often be found hunting during the day. Sometimes bears sleep for three solid months or more during the winter.

In contrast, animals like the bat are almost always dormant during the day. However, with the setting of the sun they come alive, filling the night with their eerie shrieks. The days may be full of the sounds of man. But at nighttime it is the chorus of the creatures that rings clear.
